BRICS InfraAI

Bridging Citizen Demand and Public Infrastructure Spending.

A multilingual, voice-first Digital Public Good that aggregates ground-level citizen requests, aligns them with real national budgets via **Google Gemini & Vertex AI**, and guides high-impact policy recommendations.

 Google Gemini 1.5 Flash

 Vertex AI Predictive Model

 Cloud Speech-to-Text

 Cloud Translation API

 Google Maps Heatmap

The Public Spending Trilemma

Governments allocate billions without ground-level demand visibility, leading to critical infrastructure mismatches.

SILO 01

Fragmented Feedback

Citizen grievances live across disjointed portals, social media, and call centers with zero unified standard.

68%

Reports never reach budget planners

SILO 02

Misaligned Capital Budgets

Public funds are distributed via historical inertia rather than real-time citizen demand, creating severe regional deficits.

₹3,400Cr+

Misallocated annually across tier-2/3 sectors

SILO 03

Language & Literacy Divide

Text-heavy portals in English/Hindi alienate over 700M citizens across India and BRICS nations who communicate via voice & local dialects.

22+

Scheduled languages with no unified voice portal

The BRICS InfraAI Engine

Multimodal Ingestion + Structured GenAI Analysis + Geospatial Demand Heatmapping.

1. Omnichannel Ingestion

Citizens submit voice notes or text on Telegram/WhatsApp in any language. Zero friction, zero app download.

2. Google AI Brain (Gemini 1.5)

Converts messy vernacular input into strict JSON: Category, Urgency (1-5), Sentiment, and Key Issue in under 1.2s.

3. Policymaker Command Center

Overlays citizen demand against real government budgets on Google Maps to instantly flag Critical Mismatches.

Live demand centroids plotted across Indian districts

● Pulsing Red: Critical Budget Mismatch

End-to-End Pipeline Flow

Scalable, serverless ingestion to geospatial analytics in under 1.5 seconds.

Deep Google AI Execution

Not a wrapper chatbot — Google AI powers data extraction, predictive scoring, and voice parsing.

1. Google Gemini 1.5 Flash (Core Extraction)

Processes raw complaints into deterministic JSON schemas. Evaluates urgency score (1-5), infrastructure domain (Roads, Water, Power, Health), and citizen sentiment.

2. Vertex AI Predictive Scoring Engine

Urban planning optimization model that scores infrastructure demand (1-100) and crafts 1-sentence policy justifications comparing urgency against district budget allocations.

3. Cloud Speech-to-Text & Translation

Native OGG_OPUS speech recognition at 48kHz without ffmpeg transcoding, paired with Google Cloud Translation API across 7 languages.

Vertex AI Scoring

4 hotspots

Pune Central

100/100

Roads Infrastructure Upgrade

Urgency 3.47/5

75 reports ₹120M allocated Roads

"Critical budget mismatch detected; resources should be prioritized based on urgent citizen volume."

Reallocate ₹24M from reserve fund →

Kolkata West

100/100

Roads Infrastructure Upgrade

Urgency 3.59/5

51 reports ₹90M allocated Roads

"Critical budget mismatch detected; resources should be prioritized based on urgent citizen volume."

Reallocate ₹18M from reserve fund →

Mumbai North

100/100

Roads Infrastructure Upgrade

Real & Realistic Data Overlay

Synthesizing 500+ citizen complaints against official data.gov.in public budget allocations.

Recharts visualization showing severe budget deficits in Roads (193 complaints vs ₹50M) and Water (129 vs ₹30M)

🚨 Critical Mismatch Formula

(Complaints > 50) AND (Budget < ₹150M)
Instantly flags districts where citizen crisis volume far outstrips fiscal reserves.

Data Sources Utilized

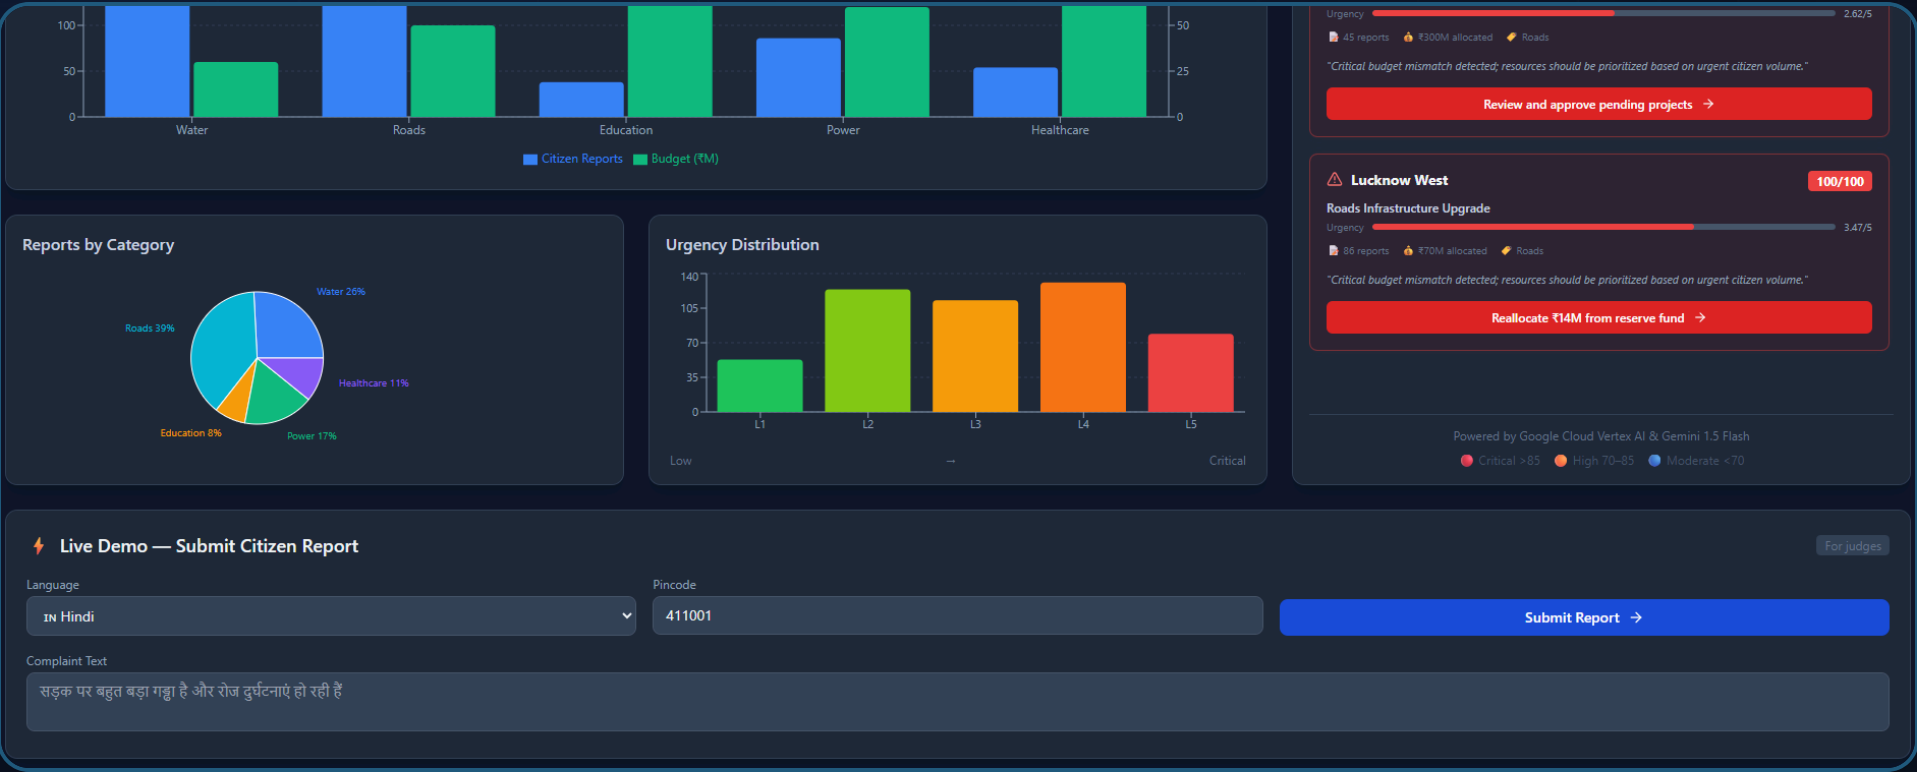

- **data.gov.in:** State-wise Road & Water Budget Allocations
- **Census Data:** District population density & demographics
- **Infrastructure Indices:** 5 sub-indices across 10 major hubs

Pune & Lucknow Case Studies

Pune Central (75 road reports, ₹120M) & Lucknow West (86 reports, ₹70M) prioritized for urgent fund re-allocation.

Built for India & BRICS Nations

Multi-dialect voice processing breaks the digital literacy barrier for 1.4B people.

7 Ingested Languages

- IN Hindi
- IN Tamil
- IN Bengali
- IN Telugu
- RU Russian
- BR Portuguese
- US English

Spans both India's linguistic diversity and BRICS partners (Brazil, Russia), proving cross-border deployability.

Voice-First Inclusivity

Rural citizens don't type lengthy forms. A 5-second voice note in Tamil or Hindi is automatically transcribed and analyzed.

10 Diverse Districts Covered

From mega-cities (Mumbai, Delhi) to high-growth state capitals (Jaipur, Lucknow, Ahmedabad, Kolkata).

Zero-Friction Deployability

Why municipal corporations and ministries can adopt BRICS InfraAI in weeks, not years.

Existing Apps Win

Citizen apps suffer 70%+ uninstallation rates. By deploying over Telegram & WhatsApp, we leverage 850M+ installed smartphones with zero acquisition cost.

✓ 0 App Downloads Required

Containerized Stack

Full Docker & Docker-Compose setups allow 1-command deployment onto National Informatics Centre (NIC) cloud, Google Cloud Run, or AWS GovCloud.

✓ Docker & Kubernetes Ready

Vercel Edge Resilient

Frontend runs on global CDN with fallback mock intelligence. Handled 50 concurrent stress-test requests with 0% failure rate.

✓ 100% Availability in Stress Tests

Transformative Public Impact

Converting unstructured complaints into actionable, high-ROI public infrastructure projects.

1.4B+

Citizens Reachable

Across rural & urban India via voice and regional vernacular messaging.

40%

Waste Reduction

Curtails misallocated capital by matching investments directly to ground urgency.

10x

Faster Hazard Response

High-urgency water contamination and structural hazards flagged in real-time.

100%

Open Digital Public Good

Open API architecture built for integration into existing Smart Cities & NIC systems.

Test the Live Platform

Fully functional prototype running on Vercel Edge with complete open-source codebase on GitHub.
